KNS Portal: Student Services System

1. Introduction

KNS Portal is a web-based student services system for Kolehiyo ng Subic. It brings academic information and common student service activities into one interface. Through the portal, students can explore school announcements, view academic results, access request forms, and review their personal information.

2. Objectives

The main objectives of the system are:

- Present academic results in an organized and readable format.
- Provide a clear place for module and grade-record requests.
- Keep school announcements and important dates visible to students.
- Display student profile details in a single portal.

3. Problem Statement

Students need an easy way to find grades, school updates, and request information. When these are spread across different pages or channels, finding the right information can take extra effort. KNS Portal addresses this need by grouping student services in a common dashboard.

4. System Overview

The portal is organized around student and administrator views. The student dashboard contains Overview, Results, My Request, and Student Information pages. These pages present a quick summary of school activity, detailed grades and assessments, service request fields, and a profile view. The administrator interface provides a separate area for school service pages.

5. System Design

- **Overview:** Displays a welcome panel, academic summary, schedule reminder, and announcements.
- **Results:** Shows subject grades, assessment scores, and academic term controls.
- **My Request:** Presents module and grade-record request fields and a downloads area.
- **Student Information:** Groups profile, course, contact, and status details.
- **Admin Interface:** Provides a separate dashboard and service pages.

6. Technology Stack

- **Structure:** HTML organizes the pages and content.
- **Presentation:** CSS styles the student and administrator views.
- **Interaction:** JavaScript handles menu selection and page loading.
- **Development Environment:** XAMPP/Apache serves the local site; VS Code is used for editing.

7. Implementation / Workflow

1. Open the student dashboard through the local web server.
2. Read the Overview page for the summary, schedule, and announcements.
3. Open Results to view subject grades and assessment details.
4. Open My Request to choose course, year, semester, and request type.
5. Open Student Information to review personal and academic details.

The sidebar loads the selected section into the dashboard. Students can also change the visible selection for announcement categories, result rows, and academic terms.

8. Advantages

- A single dashboard groups information that students commonly need.
- Clear menu sections make academic and service pages easy to locate.
- Academic results, request details, and announcements have distinct views.

9. Limitations

- Users need a device, browser, and access to the hosted portal.
- The usefulness of displayed information depends on timely school updates.
- The web interface is intended for the services represented in its pages.

10. Future Enhancements

- Add a searchable archive of school announcements and documents.
- Offer optional reminders for school dates and request updates.
- Provide more detailed academic progress charts and reports.

11. Conclusion

KNS Portal gives Kolehiyo ng Subic a clear structure for presenting student services online. It gathers academic results, school announcements, request information, and student details in one place. Its organized pages are designed to help students find the information they need and support a consistent school service experience.
